SUMMARY

Early-career product manager with an Electrical Engineering background and hands-on experience in pre-launch testing, issue investigation, and product documentation. I've tested a pre-launch insurance app across payment, identity verification, and claims flows, investigated data failures in a live fintech product, and documented product workflows in PRDs and teardown reports. Looking to support product operations in a fintech team and grow into full product ownership.

EXPERIENCE

Product Manager (Intern) | KindPing LTD

May 2026 - Present

- Identified a critical structural gap in the product's onboarding flow, leading to a founder-approved decision to redesign the v2 approach.
- Conducted a user research study showing that 68% of users misrepresent their emotional state during check-ins and 88% need anonymity to engage honestly, which reshaped the v2 scope and check-in strategy.
- Coordinated and designed a research program to validate key assumptions before design and build.

Beta Product Tester | Skydd (Pre-Launch Insurance & Wellness App)

July 2026 - August 2026

- Tested the product before launch, logging bugs and usability issues across payment flows, identity verification, and claims submission.
- Reported findings directly to the product team through a structured feedback form and WhatsApp, supporting pre-launch quality assurance.

Product Management Case Study | BizTrack (Concept Project)

February 2026 - April 2026

- Researched how micro-retailers track daily profit and found that 90% prioritised instant profit visibility over complex analytics.
- Wrote a PRD covering user personas, feature specs, and a 3-tap transaction flow that cut daily profit calculation from hours to under 10 seconds.
- Built a working prototype and an 18-month roadmap, with a go-to-market plan for Nigerian trade associations.

Product Analysis & Teardown | Expense AI (Independent Analysis)

January 2026 - January 2026

- Tested a live fintech product for 7 days, covering core features and edge cases, and found critical UX issues and data aggregation failures.
- Traced the failures to their root cause and documented them in a teardown covering user flow bottlenecks and interface inconsistencies.
- Presented findings to the founders, who confirmed the issues were being fixed in a newer version.

EDUCATION

Bachelor of Technology (B.Tech) in Electrical Engineering | Rivers State University

Rivers State, Nigeria., 2024

CERTIFICATIONS

Product Management Certification | Dive Africa

2026

Roadmap for Beginners: A Simple Guide to Product Management | PMHelp
